Re-DVV Clarification of HEI for metric 7.1.7

RE-DVV comment: As per attached documents, intent of metric and NAAC SOP only serial no. 1 has been considered

HEI Response: As per the Re-DVV comment, HEI is submitting the relevant data in this metric as per the NAAC SOP. The HEI campus is user friendly with all the facilities as per the metric 7.1.7 for disabled friendly, barrier free environment for Divyangjans.

HEI Inputs: **All the above option A**

For this metric all the necessary inputs are already available on the HEI website. Now, HEI is requesting Re-DVV to reconsider the response of HEI i.e. Option A or all the above. For these relevant justifications and documentations are submitted herewith.

1. Built environment with ramps

Facility of Ramp's for easy access to classrooms, Library, washrooms, Laboratories, hostels, auditorium etc. in the campus.

The ramps are constructed for the easy access of physically disabled persons. These ramps are also used for smoothly operating wheelchair of divyangjan students.

Interactive Smart boards as an assistive technology in 17 classrooms, Seminar Hall

When it comes to assistive technology in the classroom, smart boards such as Brivo interactive Smart boards, Samsung's Flips are available in the college. They equally benefit students with learning or cognitive disabilities, hearing or vision difficulties and mobility limitations, as well as students who face a language barrier.

Students with vision difficulties, for instance, have an easier time reading from an interactive whiteboard since the text can be expanded, highlighted or bolded. Teachers can also supplement with audio so students can listen to their lessons rather than having to see across the room. This is especially useful for children who have dyslexia or otherwise struggle with reading. Teachers can record lessons on the smart board so students can watch them again in smaller, bite-sized chunks and take their time mastering a new concept.

Class recordings also benefit any students who may need to learn remotely. Equipped with a camera, the interactive whiteboard allows remote learners to videoconference with the classroom so they can see their classmates and be an active part of discussions even if they aren't physically in the room.

Features such as text-to-speech and voice-to-text software allow the smart board to deliver questions to students aloud and automatically transcribe their verbal answers.

Assistive classroom technology can also help students who have fine motor issues. With the option to write with their finger, a stylus or even a tennis ball, each student can use what's most comfortable for them. They can practice tracing letters and numbers, for instance, displayed on the board in various sizes. As their motor skills improve, their teacher can decrease the font size. And with

handwriting-to-text conversion, students who aren't able to type on a keyboard can write longer-form assignments with ease.

Visual impairment: Visual impairment can include blindness, dyslexia, or other visual impairment that impedes the ability to see or read. IDW can be used in different ways to help students with sight impairment for example:

Zooming or enlarging text and images to make it larger or easier to see

IDW built-in speakers in combination with text-to-speech (TTS) software can help broadcast materials aloud

Audio impairment: Audio impairment affects students who are deaf or hard of hearing. IDW can be used as assistive listening systems for example:

IDW in combination with microphones and built-in speakers to enhance the speaking volume

IDW in combination with recording software enables recording of presentations for students to review if the teachers speaking speed is too fast or the learning environment is too noisy
